# 1. Breakthrough FDA-Certified Early Warning on CoViD-19

Anosmia (losing sense of smell) has proven an early warning of CoViD-19 before any other symptoms show. But people often don't notice this or test themselves for it.

Anosmia is 10x more prevalent than cough or fever; 80% CoViD-positive people report anosmia; and 100% of asymptomatic CoViD carriers infect others.\*

Uniquely registered as a CLASS II Exempt Medical device by US FDA (Food & Drug Administration) Scientific design against clinical anosmia testing protocols; metered-dose inhaler technology to dispense distinct aromas onto a disposable, sterile test sheet. Sniff the sheet, Confirm the scent. Result.

Efficient and economical - screen in 5 seconds, no specialised personnel nor training required, a fraction of the cost and time of a test, so you can isolate and/or prioritise for a clinical test.

Ideal for workplaces; manufacturing, offices, hospitality, retail, leisure and transport and schools

- NON-INVASIVE, DRY and CONTACTLESS No swabs, personal contact, nor cross contamination
- METERED DOSE PRECISION Dispenses a consistent, exact amount of aroma to detect
- ECONOMICAL & SCALABLE 560 tests per kit, less than \$0.60 / £0.45 / €0.50 per person

\* Full pack on scientific validation and FDA details provided for purchase decision

## 2. Effortlessly DECONTAMINATE everyone and everything on arrival : on site: on dispatch

People Safe, fast and with no wet effect

For more info, click [here](#)

The only disinfection tunnel 3<sup>rd</sup> Party-certified safe for people  
Neutralises viral and bacterial contaminants using 70° ethanol to ensure no pathogens pass on surfaces incl.

- hair, clothing or uniforms, shoes, bags, PPE
- on packaging or items people touch (trolleys, tools, rental equipment).

Works in seconds and alongside other entry point controls

Six variants to meet different entry, collection and exit point needs across multiple industries and sectors

- Healthcare entry points and decontamination between sessions
- Manufacturing, workspaces, schools
- Retail and Leisure venues
- Transport hubs
- Trolleys, pallets, parcels, tools

Independently  
tested by  
ICARE

# About INNOVO and its Health Innovation Vehicle

INNOVO is a sustainability-centred network bringing buyers and suppliers together to do business: We enable reduced spend through aggregation, increase customer appeal and access to innovations across sectors. The Health Innovation Vehicle has been focused on personal protection and infection control.

## Products certified for reference markets:

- We are directly connected with the most established and experienced suppliers, dealing only in certified, validated items from whitelisted sources
- We scout for innovations that are solving the pressing problems in health

## Shortest chain:

- INNOVO takes no payment from the buyer – your transaction is direct with supplier
- A “commercial concierge” connects you directly to the factory mandate or to an adviser who can meet your needs through their own direct relationships
- We are also set up to work with your current supply chain, to reduce your costs by gaining rebates from them

## Lower costs:

- Our service is entirely funded from a share of the rebates our suppliers can give from matching them with qualified customers. Rebates are distributed through PwC
- We relentlessly source the most reliable stock at a fair price through our member companies and advisers
